All

Please see the attached Technical Memorandum recommending an optimized long-term monitoring program for benzene, toluene, ethylbenzene, and xylene (BTEX) at the Fire Training and Demonstration Pad (SEAD-25) at Seneca Army Depot Activity in Romulus, New York.

This memo recommends a ramp down/close out strategy for monitoring wells for BTEX at SEAD-25.

The recommendations do not impact the ongoing PFAS investigation at this site. If you have any questions please let us know.

I hope that you all are safe and healthy.

Respectfully

Jim
